SUMMARY

Frontend engineer with 3+ years of experience building production web applications in React, Next.js, Vue and TypeScript, including learning dashboards, a browser-based design tool, an e-commerce platform and a multi-role marketplace I founded and lead. I also build React Native apps for Android, including controlled browsers for students and exams. Strong in role-based interfaces, complex interaction state, API integration, accessibility and server-side rendering.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), Vue.js, HTML5, CSS3, Tailwind CSS, Redux Toolkit, Fabric.js, HTML5 Canvas

Practices: Responsive design, accessibility (WCAG audits), SSR/SSG, state management, reusable component architecture, design systems, visual regression checks

Mobile: React Native, Android, Android Studio, Expo, Progressive Web Apps

Backend and APIs: REST API integration, Node.js, Express.js, NestJS, MongoDB, Paystack, OPay

Tools: Git, GitHub, Vite, Figma, Postman, GitHub Actions, Claude, Cursor, GitHub Copilot, OpenAI Codex

EXPERIENCE

Founder & Lead Software Engineer — Apr 2025 – Present

PhyhanAgro Marketplace Ltd, Lagos, Nigeria | Company site

Pre-launch agricultural marketplace connecting verified farmers with buyers and logistics companies.

- Lead engineering from product rules and architecture to interfaces, across Next.js web and staff apps and an Expo mobile app.
- Built the buyer journey, from browsing, search and filtering to a multi-farm cart grouped by farm with one checkout.
- Designed separate workspaces for buyers, farmers, agents and staff, driven by one permission registry.
- Built a shared design system with light and dark themes, a defined state for every screen (loading, empty, error, offline, forbidden) and language packs for Nigerian Pidgin, Yoruba, Hausa and Igbo.
- Designed payment interfaces around honest states, including a “We’re confirming your payment. Don’t pay again.” state for unresolved attempts.
- Built onboarding, document verification and an operations console for users, settings, approvals and the audit log.

Frontend Software Engineer — Apr 2025 – Jun 2026

Chronicles Software Dev Company, Lagos, Nigeria | Company site

- Built Safe Browser alone, a React Native browser for Android on the company’s student tablets, with a blocklist for adult and betting sites, enforced safe search, activity reports to parents by email and PIN-protected downloads.
- Built Exam Browser alone, a React Native exam browser for the same tablets that disables the back button, screenshots and screen recording, and ends the exam if a student leaves the exam screen.
- Resolved a persistent Android Studio build failure with no documented fix by moving the source into a clean project.
- Built interactive learning dashboards for the SuccessTab platform with React.js, TypeScript and Tailwind CSS.
- Integrated REST APIs to drive dynamic rendering by user role and school type, and debugged role-based data flows.
- Ran UI audits and visual regression checks against WCAG guidelines to keep modules accessible and consistent.
- Investigated state-management issues and performance bottlenecks to improve dashboard reliability.
- Reviewed code and mentored junior developers; worked on the SuccessBox public download site.

Software Engineer — Jun 2024 – Mar 2025

Skyestudio, Lagos, Nigeria

- Developed Skye Editor, a browser-based design tool for marketing materials, using Vue.js, Vite and Fabric.js.
- Built drag-and-drop, object transformations, clip-path manipulation, multi-layer management and opacity controls on HTML5 Canvas.
- Added text editing, image manipulation and shape customization, and multi-format export for practical design workflows.
- Optimized canvas rendering so the editor kept up with continuous drag and transform interactions.

Frontend Engineer Mar 2023 – Jun 2024

Tino, Lagos, Nigeria

- Implemented Next.js server-side rendering and routing to support SEO and initial page load on an e-commerce platform.
- Built an interactive calendar scheduling module with JavaScript and CSS3.
- Developed reusable frontend structures and improved responsive layouts with Tailwind CSS across mobile and desktop.

Software Developer Dec 2022 – Mar 2023

Kryzotech, Dhaka, Bangladesh (remote)

- Built responsive interfaces and integrated them with backend REST APIs on a distributed team.
- Translated business requirements into deployable features with engineering and design stakeholders, using Git for source control.

SELECTED PROJECTS

Developer Portfolio | React, TypeScript, Tailwind CSS, Express, MongoDB

Designed and built a custom site with working interactive figures, including a canvas editor with layers, undo and SVG/PNG export, written without a canvas library. Live | Source

FiveCart | React Native, Expo, TypeScript, AsyncStorage

Product-upload app with camera and gallery picking, input validation, on-device persistence and a clear state for every limit and failure. Source

EDUCATION

B.Sc. Computer Science, University of Ilorin, Kwara, Nigeria Dec 2022 – Aug 2026
